Good Day!

I am writing very concerned about the issue of genetically engineered foods. This is very very important, to not only myself, and my family, but also every person who eats. What right does anyone have to manipulate our food genetically? Isn't it bad enough that fertilizers have killed the soil?

I demand a minimum of 5 years moratorium be put on genetically engineered foods until the long and short term effects can be conclusively studied. Genetically engineered foods should not be grown outside of laboratories because the genes can cross into the environment and then into other species.

In addition, at the very least, I would expect, living in America, that the genetically engineered products currently on the market BE LABELED.

I am truly amazed these products are being sold without being tested or labeled. WHAT IS HAPPENING HERE?

Thank you for attention to this important issue. After all, we depend on our food to work and live on planet earth.

Sincerely,

Michaela Bourdreau

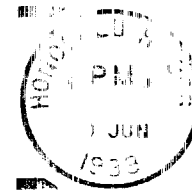

HELP ! PLEASE !
